Are You Being Scanned - Scammed?

Protect Yourself with RFID

So What's RFID?

RFID standing for radio frequency identification, is the use of radio waves to read and capture information stored on a tag attached to an object - credit card.

A tag can be read from up to several metres and does not need to be within direct line of sight of the reader to be tracked. The chip on your credit card or passport carries a lot of sensitive information which an unscrupulous person with the correct technology can read within a few metres

Meet the RFID Family

AR427
